Final report of excavations at Samad al-Shan and other sites in the Sultanate. The cemeteries in Samad are the most intensively and extensively researched objects in central Oman for the late pre-Islamic period. This work documents the artefactual finds and their contexts. It includes a new reappraisal of the history and sociology of the late pre-Islamic history and archaeology. The main study object is the Samad Late Iron Age, but in order to define it, one must extract its find inventory from the preceding ones. Relative and absolute chronology attempted. Summaries in English and Arabic. It includes the skeletal analyses carried out by Manfred Kunter. The original research documents are archived in the German Mining Museum, Bochum.

Catalogue study of the largest hoard find of copper artefacts to date from the Near East, most of which derive from the Early Iron Age. It complements the archaeological evidence from Samad al-Shan, which was researched parallel to it. The finds appear to have been stashed in an Umm an-Nar period tomb by robbers perhaps still in the 1st millennium BC.

Studies presented for the Samad assemblage and Iron Age in the South Province Zafār. The final report for the late Early Iron Age cemetery at Bawshar appears. The excavation records had remained unpublished for nearly 20 years. The discovery of the Late Iron Age finds at ‘Amlā’ and al-Baruni/Samaṭil established interconnections with the late pre-Islamic sites to the north in the U.A.E. Finally, the mythical builder of the tower tombs was investigated.

Comprehensive catalogue with good documentation and analysis of the provenance and use mostly of metallic hoard artefacts based on European research models. Four regional hoard areas are defined in terms of artefact type. The author distinguishes recoverable from non-recoverable hoards as a means of interpreting the meaning of these finds. Few hoard finds, if any, show use wear. Most are ergologically useless as tools and weapons. The original documentation for this research is archived in the Peabody Museum, Harvard University.

After an interval of several years, the author completed the corpus of prehistoric copper hoard finds from India begun in 1980. Newly discovered hoard artefacts are published, mostly from the eastern part of India and Madhya Pradesh. The first large published group of modern quantitative analyses of the alloys of the artefacts provide a broad basis for a better understanding, especially of the Indian copper hoards.

This report documents the excavation in 1971 of a metals period cemetery in Orissa. This site yielded very elaborate ground lithics, metallic objects and human osteal remains. They are the first such finds to come to light in India since the discussions of R. Heine-Geldern regarding his Austronesian culture.
